

Integrating Research Infrastructure for European expertise on Inclusive Growth from data to policy

CALL: DATA FORUM ON DATA POOLING: OPPORTUNITIES AND CHALLENGES

10-11 October 2019, CELSI, Bratislava (Slovakia)

CELSI has accumulated more than ten years of experience with the collection, processing and analysis of the WageIndicator data on wages, cost of living, minimum wages and collective agreements as well as related country level information on a global scale in collaboration with the WageIndicator Foundation and research institute AIAS of the University of Amsterdam. Following up on the agenda explored at the data forum held at AIAS, the data forum at CELSI will focus on the topic of pooling salary survey data from multiple sources. The possibilities of data pooling for research will be discussed and state-of-the-art research methods will be presented. Data combining can be performed on multiple datasets, but it poses challenges related to the dimensions of time, scales, groups, variances, variables or levels of observation. These opportunities and challenges, along with the possible biases and methods of alleviating them in online survey data, will also be addressed during the data forum.

Deadline for applications: 5 September 2019

CALL: WINTER SCHOOL 'FOUR DIMENSIONS OF THE FUTURE OF WORK'

20-24 January 2020, CEPS, Brussels (Belgium)

The world of work looks different every day with unprecedented changes in their scale, speed, and depth. Not only have professions and labour markets changed, the very nature of work is changing, placing welfare states, social partners, businesses and individuals under pressure. This event aims to spark innovative dialogues, support research activities, and promote best practices exchange connected to the future of work. The winter school explores the changing nature of work and its effects on the life of individuals and in the society. The participants of the winter school will explore the theme through four different approaches: technological opportunities and risks, equalities and inequalities related to new forms of work, the challenges for social dialogue and collective bargaining as well as the changing skills requirements.

Deadline for applications: 30 September 2019

VIRTUAL DATA ACCESS

In addition to the visiting grants for transnational access, InGRID-2 also provides free of charge virtual data access to widely used resources needed for research that are openly and freely available through communication networks. For non-commercial use, interested parties (researchers, students and especially EU researchers) can have access to datasets of LIS and LWS microdata and EUROMOD, without visiting the research infrastructures. In this virtual data access, there is no need for a comparative selection of users and there is thus no selection procedure. All interested parties are free to fill in the identification form after which they will be contacted to receive a login and instructions to download the data.
